procedure

HOW TO TAKE SAMPLES FOR ANALYSIS?

Taking a representative sample of your hay stock.

SMALL STACKS

Choose 10 to 20 stacks randomly avoiding outside stacks or stacks on the heap surface. Collect 1 to 2 handles inside each stack (ideally stacks should be opened). Gather everything in a bucket and mix gently (to avoid leaves from falling at the bottom of the container).

After homogenization, keep only 10 handles, about 300 g of product.

LARGE STACKS (ROUND FOR SQUARE)

Choose 5 to 10 stacks randomly avoiding outside stacks or stacks on the heap surface. Collect 1 handle at 3 different spots inside each stack (ideally stacks should be opened).

Gather everything in a bucket and mix gently (to avoid leaves from falling at the bottom of the container).

After homogenization, keep only 10 handles, about 300 g of product.

PACKAGING

Any sample of hay must be accompanied by an information form. In case of multiple sendings, it is important to correctly identify the different samples onto the bags and on the information forms.

Put the 300 g into a waterproof and resistant bag (large freezer bag or garbage bag type).

Evacuate residual air from the bag to avoid breathing from the sample.

Carefully close the bag.

Place the bag in a suitable box (shoe box type).

SENDING SAMPLES

In order for us to process your hay sample at the earliest convenience, we advise you to send it by

REVERDY – SARTILLY INDUSTRIES
Service d'Analyse des Fourrages
784 Route de la Fieffe Mariette - Le Mesnil Tôve
50520 JUVIGNY-LES-VALLEES

RESPONSE TIME

We are committed to return the results to you by mail and / or by email (remember to provide it on the information form) within 15 days following your sample receipt.

PAYMENT

Online payments on www.reverdy.fr
